

# roots Terra-Sorb

**ROOTS® Terra-Sorb®** Medium Hydrogel is a high-quality, long-lasting copolymer gel that absorbs many times its weight in water and slowly releases it into the root zone for use by plants. ROOTS® Terra-Sorb® Medium is used as horticultural soil amendment for planting, seeding, sodding, flower bed preparation and potted plants. ROOTS® Terra-Sorb® significantly increases the water-holding capacity of soil and will repeatedly absorb and release water for several years until it biodegrades. ROOTS® Terra-Sorb® does not contain sodium.

## **DIRECTIONS FOR USE (COARSE AND MEDIUM):**

**Tree and Shrub Planting:** Mix Roots® Terra-Sorb® evenly with the backfill soil at a rate of 2 ounces (by weight) per inch caliper for Balled and Burlapped trees and shrubs, or 1 ounce (by weight) per 5 gallons for containerized trees and shrubs. Volume rates are shown in adjacent chart.

Flower Beds and Gardens: Roots® Terra-Sorb® is mixed into the top 4 inches of soil at a rate of 1 pound per 100 square feet prior to planting or seeding. It can be broadcast by shaker, spreader or hand, then raked or rototilled into soil. Roots® Terra-Sorb® is to be mixed into soil. It is not designed for surface applications.

**Sodding, Seeding or Sprigging:** Roots® Terra-Sorb® is mixed into the top 2 to 4 inches of soil at a rate of 3 pounds per 1,000 sq. ft. or 150 pounds per acre prior to seeding, sodding or sprigging. Apply by shaker, drop spreader or hand, then rake or rototill into the top 2 to 4 inches of soil. Roots® Terra-Sorb® is to be mixed into soil. It is not designed for surface applications.

Potting Mix Amendment for Containerized Plants and Hanging Baskets: For machine or hand mixing, add 2 pounds of Roots® Terra-Sorb® per cubic yard of potting mix. Blend thoroughly throughout mix. For small batches, add 1 ounce (by weight) Roots® Terra-Sorb® to each cubic foot of growing or potting mix.

Surface Dust Control for Indoor Arenas: Arena's with dirt floors must be watered frequently to reduce dust. Roots® Terra-Sorb® will help keep the soil moist. A moist surface will reduce dust and give the arena surface a more consistent, softer texture. Apply Roots® Terra-Sorb® evenly by hand or with a standard spreader at a rate of 5 pounds per 1,000 sq. ft. Work Roots® Terra-Sorb® into the upper 2 inches of the soil surface. Water slowly and thoroughly. Wait 2 to 4 hours and water again. This first watering is very important, as the Roots® Terra-Sorb® must be allowed to swell to its full capacity. Thereafter, repeat watering regime as needed when surface appears dry. One application of Roots® Terra-Sorb® will last approximately nine months to one year before additional material needs to be re-applied. For best results, add a wetting agent to the water to facilitate water penetration and spread in the soil.

HEALTH AND SAFETY: Avoid breathing dust. Wash hands after handling. Gloves are recommended for repeated or prolonged handling. Slippery when wet.

### Precautionary Statements

Keep out of reach of children

Dispose in accordance with all federal, state and local regulations.

STORAGE: Store in a dry location.

### WARRANTY

**NOTE** To the extent consistent with applicable law, buyer assumes all responsibility for safety and performance if this product is not used according to the directions.

MEDIUM GRADE

# **Planting Gel**

- Super absorbent hydrogel holds up to 150 times its weight in water
- Use for trees, shrubs, gardens, and indoor and outdoor plants
