FERTILIZER with Prodiamine 0.38%

*Do not use on food producing trees, vines, or plants.  ** Not for use on container grown plants.

NOTE

Dome Abelia: Sherwood would not exceed those given in the table below.

¹  In many areas a single application of 170 to 395 lbs./Acre of this product will control goosegrass. However, under different growing conditions or sites, multiple applications may be needed. Proper timing is critical for optimum control. Application of this product to turf stressed by drought, low fertility, or pest damage may result in turf injury.

Application of this product to turf stressed by drought, low fertility, or pest damage may result in turf injury.

Do not apply to overseeded turf within 60 days after seeding or until after the second mowing, whichever is longer. This product is not likely if this product is applied before seedling secondary roots are in the second inch of soil, not thatch plus soil.

Do not apply to golf course putting greens.

Do not apply this product through any type of irrigation system.

This product is a selective preemergence herbicide that provides residual control of many grass and broadleaf weeds as well as non-selective control of many crape myrtles, hibiscus, weeds of bird and dog droppings. This product controls susceptible weeds by inhibiting weed seeds from germinating. This product is not a systemic herbicide and does not control weeds that are already present. This product is not a contact herbicide and does not control weeds that are already present. This product is a preemergence herbicide and will not control emerged weeds. Most effective weed control in ornamentals occurs when applied to newly transplanted ornamentals as a broadcast or directed application. Delaying this product after cuttings form roots and become established. Application of this product to newly transplanted ornamentals as a broadcast, over the top or directed application. Delaying application after cuttings form roots and become established. Apply before budding/grafting or after buds/grafts have taken. This product is a preemergence herbicide and will not control emerged weeds.

This product is suggested for use on the turfgrass species listed in the following table. Do not exceed the maximum yearly rate as given in the following table:

Maximum use rate selection should be based on turf species. The length of time of residual weed control provided by this product is related to the rate applied. Do not apply to turf stressed by drought, low fertility, or pest damage may result in turf injury.

Do not apply to overseeded turf within 60 days after seeding or until after the second mowing, whichever is longer. This product is not likely if this product is applied before seedling secondary roots are in the second inch of soil, not thatch plus soil.

PREEMERGENCE WEED CONTROL

Before buying this product, read the Warranty Section elsewhere on this label.

NOTE: Supplemental applications of lawn fertilizer are needed to achieve a minimum of 1 pound nitrogen per 1,000 sq. ft.

*Do not use on food producing trees, vines, or plants.  ** Not for use on container grown plants.

Kiwi*

Japanese Maple

Barberry

Sequential applications may be made so long as the total amount of product applied does not exceed the maximum annual application rates suggested for each turf species. All applications must be made prior to germination of the weed seeds.

³  Suppression only.

²  Apply this product in late summer, fall or winter prior to germination.
