

NET WT. 20 LBS. (9.07 KG)

NON-AGRICULTURAL USE REQUIREMENTS The requirements of this box apply to uses of this product that are NOT within the scope of the Worker Protection Standard

for agricultural pesticides (40 CFR Part 170). The WPS applies when this product is used to produce agricultural plants on farms, forests, nurseries, or greenhouses.

For applications in landscape settings and in non-cropland sites, DO NOT enter or allow others to enter the treated area until dusts have settled.

#### STORAGE AND DISPOSAL DO NOT contaminate water, food or feed by storage or disposal.

USE PRECAUTIONS

Pesticide Storage: Store product in its original container in a cool, dry, locked place out of the reach of children and animals. Pesticide Disposal: Wastes resulting from the use of this product must be disposed of on site or at an approved waste disposal facility. Container Handling: Nonrefillable container. DO NOT reuse or refill this container. Offer for recycling if available. Completely empty container into application equipment. Then dispose of empty container in a sanitary landfill or by incineration, or, if allowed by State and local authorities, by burning. If burned, stay out of smoke.

#### This product is a preemergence product for control of broadleaf weeds and annual grasses listed elsewhere on this label in container and landscape ornamentals, nursery stock, Christmas trees, ground covers/perennials, non-bearing fruit and nut trees, non-bearing vineyards and non-cropland areas. Apply this product anytime prior to germination of target weeds, or immediately after cultivation. Length of weed control will vary with rate of this product applied, weed population, potting media or soil conditions, temperature, watering regime, and other factors. Following application, user should monitor and observe level of

weed control over time to determine when additional applications may be needed.

This product controls weeds growing from seed. This product does not control established weeds, weeds growing from stolens, rhizomes, or root pieces. Existing weeds should be controlled by cultivation or with postemergence herbicides. Weed residues, prunings and trash should be removed or thoroughly mixed into soil prior to treatment. Soil should be in good condition and free of clods at the time of application. A single rainfall or sprinkler irrigation of 0.5 inches or more, or flood irrigation is required to activate this product. Optimum weed control is obtained when this product is activated within 1 day of application. If rainfall or irrigation does not occur within 1 day of application and tillage is possible, this product may be activated using cultivation equipment capable of uniformly mixing the herbicide into the upper 1-2 inches of soil. Failure to activate this product within 1 day of application may result in erratic control of annual grasses. **DO NOT** apply when wind conditions favor drift of this products granules from the target area.

Accidental application to turf may occur when applying this product to ornamental plantings. This product is not suggested for weed control in turfgrasses, but turfgrasses are normally tolerant to small amounts of this product that fall outside of the intended area of application.

## Treatment Species Not Listed on the Label for Woodace Preen Plus

Tolerance of Turfgrass Adjacent to Ornamental Plantings

Users who wish to use this product on plant species not listed on this label may determine the suitability for use by treating a small number of such plants at a rate. Prior to treatment of larger areas, the treated plants should be observed for any sign of herbicidal injury for 30 to 60 days of normal growing conditions to determine if the treatment is safe to the target plant species. The user assumes responsibility for any plant damage or other liability resulting from use of this product on plant species not listed on this label.

#### In Arizona: The state of Arizona has not approved this product for use on plants grown for agricultural/commercial production; such as on Christmas tree plantations, container grown or field grown ornamentals, non-bearing fruit and nut trees and

Repeat applications at 200 pounds per acre and higher should not be made sooner than 60 days after a previous application of this product. **DO NOT** apply over 800 pounds per acre total of this product within a 12-month period.

## **DO NOT** apply this product by air.

Not for sale, distribution or use in New York State.

WEED RESISTANCE MANAGEMENT For resistance management, please note that Woodace Preen Plus contains both a Group 3 trifluralin and a Group 21 isoxaben herbicide. Any weed population may contain plants naturally resistant to Group 3 and/or Group 21 herbicides. The resistant individuals may dominate the weed population if these herbicides are used repeatedly in the same fields. Appropriate

resistancemanagement strategies should be followed. • Rotate the use of Woodace Preen Plus or other Group 3 and 21 herbicides within a growing season sequence or among growing seasons with different herbicide groups that control the same weeds in a field.

· Contact your local extension specialist or certified crop advisors for additional pesticide resistance-management and/or integrated weed-management recommendations for specific crops and weed biotypes.

Proactively implementing diversified weed control strategies to minimize selection for weed populations resistant to one or more herbicides is recommended. A diversified weed management program may include the use of multiple herbicides with different modes of action and overlapping weed spectrum with or without tillage operations and/or other cultural practices. Research has demonstrated that using the labeled rate and directions for use is important to delay the selection for resistant weeds. It is recommended to scout for weeds before this product is applied for identification and growth stage and after application to facilitate the early identification of weed shifts and/or weed resistance and thus provide direction on future weed management practices. One of the best ways to contain resistant weed populations is to implement measures to avoid allowing weeds to reproduce by seed or to proliferate vegetatively. Cleaning equipment between sites and avoiding movement of plant material between sites will greatly aid in reducing the spread of resistant weed seed.

# APPLICATION INSTRUCTIONS

Apply this product using a drop or rotary-type spreader designed to apply granular herbicides or insecticides. Calibrate application equipment prior to use according to manufacturer's directions. Check frequently to be sure equipment is working properly and distributing granules uniformly. DO NOT use spreaders that apply material in narrow concentrated bands. Avoid skips or overlaps as poor weed control or crop injury may occur. More uniform application may be achieved by spreading half of the required amount of product over the area and then applying the remaining half in swaths at right angles to the first.

This product must be soil-incorporated within 24 hours of application either by at least 0.5 acre inch of water (rainfall, irrigation) or mechanical incorporation. If a second incorporation is needed it should be delayed 3 to 5 days after the first incorporation and be completed prior to planting.

Application Techniques for Applying Woodace Preen Plus • When using a drop-type spreader, a splash board mounted under the hopper will provide more even granule distribution.

• A chain fastened to the side of the spreader and allowed to drag on the soil surface can be used to mark the edge of the treated swath and help prevent skips or overlaps.

• For treating smaller areas or rows of nursery stock or ornamental beds, a hand held or push-type rotary applicator such as a whirlybird or cyclone unit is suggested. For hand held units, walk and turn the crank at a constant rate of speed. A shaker-type applicator made from a small container with holes punched in the bottom is for small, difficult to treat areas. Carefully measure the amount of product needed to avoid over application.

Weeds Controlled or Suppressed by Woodace Preen Plus

• The weight-to-volume conversion table (below) provides equivalent amounts of this product.

Weeds Controlle	d When Applied at 13	3 lbs./acre (3.1 lbs./	1,000 sq. ft.)		
aster, slender barnyardgrass, annual bursage, annual celery, wild chickweed, common clover, white crabgrass cudweed, purple	cupgrass, southwestern fiddleneck, coast filaree, redstem fleabane, blakeved fleabane, dwarf foxtail, yellow groundcherry, lanceleaf	henbit horseweed junglerice knotweed, prostrate lambsquarters, common mallow, little mustard, lndian mustard, wild	nightshade, black oat, wild panicum, fall pepperweed, Virginia pigweed pineappleweed plantain, slender purslane, common radish, wild	ragweed, common rocket, London rockpurslane, desert shepherdspurse sibara smartweed, Pennsylvania sowthistle, annual speedwell, purslane	sprangletop, Mexican telegraphplant thistle, Russian witchgrass

### Labeled Uses **Ornamental Plantings**

This product may be used as a preemergence treatment for control of certain listed broadleaf weeds and annual grasses in container grown ornamentals, landscape ornamentals, field grown ornamentals, ground covers/perennials, Christmas trees, non-bearing fruit and nut trees, and non-bearing vineyards. Apply this product anytime prior to germination of target weeds, Refer to the Product Information section of this label for Use Precautions, Use Restrictions and information on application,

application rates and weeds controlled. Special Use Precautions To avoid possible injury, **DO NOT** apply this product to:

• nursery, forest, or Christmas tree: seedling beds, cutting beds, or transplant beds. • nursery seedbeds or forest or Christmas tree seedling transplant beds.

• unrooted liners or cuttings that have been planted in pots for the first time. pots less than four inches wide.

• bedding plants or areas where bedding plants will be planted or transplanted within one year following application. ground covers until they are established and well rooted.

DO NOT apply this product to newly transplanted ornamentals, nursery stock, Christmas trees, ground covers, non-bearing fruit and nut trees and non-bearing vineyards until soil or potting media has been settled by packing and irrigation or rainfall and no cracks are present or injury may occur. Repeat applications at 200 pounds per acre and higher should not be made sooner than 60 days after a previous application of this product. **DO NOT** apply over 800 pounds per acre total of this product within a 12-month period.

Where loss of stand has occurred in field grown ornamentals, use untreated soil as fill around roots when replacing plants or Note: Injury on the following plant species has been observed following applications of this product and use is not

Ornamental Bulbs
DO NOT use this product in bulb production fields. For use in landscape settings only.

Special Use Precautions:
DO NOT apply to tulip plants that have emerged to a height greater than 3/4 inch. DO NOT apply to gladiolus prior to emergence or if corms are less than one inch in diameter.

This product may be applied for control of susceptible listed annual weeds in ornamental bulbs, e.g., bulbous iris, daffodil (narcissus), hyacinth and tulip. bulb emergence but prior to flowering and after flowering. For fall planted bulbs, apply this product again in late winter or early spring to weed-free soil surfaces.

DO NOT apply to bulbs while they are flowering.

This product is suggested as a preemergence treatment for control of certain listed broadleaf weeds and annual grasses on non-cropland areas such as industrial sites, utility substations, highway guardrails, sign posts, delineators, etc. Apply this product anytime prior to germination of target weeds. Areas to be treated should be free of established weeds or existing weeds should be controlled with postemergence herbicides. Refer to the "Product Information" section of this label for Use Precautions and information on Application, Application Rates, and Weeds Controlled NOTE To the extent consistent with applicable law, Buyer assumes all responsibility for safety and performance if this product is not used according to the directions.

This product may be applied in open shadehouse-type structures where the natural flow of air is unimpeded. Do not apply in enclosed greenhouses or in enclosed shadehouse-type structures. Do not apply within three weeks prior to enclosing greenhouse or poly-type structures.
