

# Starter Fertilizer, Seeding Mulch and Tackifier All in One Product

PennMulch Seed Starter provides the same nutrients as a 10-20-05 starter fertilizer

Recycled paper and super absorbent polymer store moisture for seedlings

Tackifier holds seed and soil in place during the crucial first states of establishment

# PennMulch<sup>®</sup> Seed Starter<sup>™</sup>

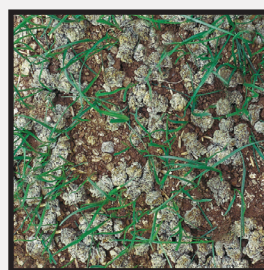

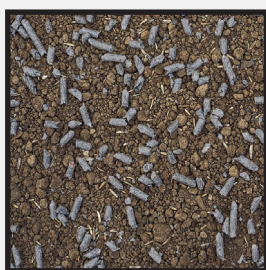

## Confidence in Successful Turf Establishment

PennMulch Seed Starter is the only seed establishment product containing Moisture Cell Technology. Comprised of super absorbent polymers, Moisture Cell Technology can absorb up to 400 percent its weight in water which causes the pellets to expand. As the seed bed dries the microscopic polymer crystals release water back into the soil, providing the new seedlings with the moisture they need to grow healthy and strong. Though there are look-alike products on the market none can match the results of PennMulch Seed Starter.

## Full Rate of Starter Fertilier

While the NPK analysis may seem low at a 1-2-0.5, when applied at the recommended rate of 50 lbs. per 1,000 sq. ft. it is the same amount of fertilizer as a 10-20-5 applied at 5 lbs. per 1,000 sq ft. Both apply 1 lb. of Phosphorus per 1,000 sq. ft.

## Eliminate Weed Problems

Straw and hay often contain perennial grassy weeds like Orchard grass and Timothy that cannot be selectively controlled once new turf is established. Choose the weed seed free option and eliminate the extra work of controlling troublesome weeds.

mulch.

## Build in Moisture Meter

With PennMulch Seed Starter it is easy to tell when it is time to water. When the pellets turn light gray, it is time to water.
